SUMMARY

Senior Frontend Engineer with 10+ years of experience building scalable, high-performance applications using React and TypeScript across web and mobile platforms. Specializes in complex, data-driven interfaces, frontend architecture, and performance optimization, with a strong focus on building maintainable and reusable UI systems. Experience working with Node.js and AWS (Lambda, API Gateway, DynamoDB) to support API-driven applications, enabling a deeper understanding of end-to-end system design and data flow. Proven track record delivering production-ready solutions in enterprise and high-growth environments, collaborating cross-functionally to build user-focused, scalable systems.

EXPERIENCE

Senior Front End Engineer

MilliporeSigma **October 2023 - Present, St. Louis, MO**

- Develop and optimize React and Next.js based customer-facing interfaces for a large-scale e-commerce platform, improving performance, accessibility, and maintainability across core user flows.
- Implement and manage GraphQL data-fetching strategies to support complex, data-driven user experiences across product and search workflows.
- Design and maintain reusable UI components and frontend patterns that improve consistency and enable scalable development across teams.
- Collaborate closely with product, design, and backend teams to deliver responsive, production-ready features in a high-traffic environment.
- Improve frontend performance through memoization, code splitting, and render optimization techniques to enhance load times and user experience across high-traffic user flows.
- Write unit and integration tests using Jest and React Testing Library to reduce regressions and improve release confidence.
- Contribute to frontend architecture discussions, influencing decisions around performance, scalability, and maintainability.

Senior UI Engineer

Uptycs, Native Security **November 2020 - October 2023, Waltham, MA**

- Delivered complex, data-intensive features across web and mobile applications using React and React Native for security-focused workflows.
- Designed and implemented scalable frontend architecture using React, Redux, and modern JavaScript patterns to improve maintainability and consistency.
- Integrated frontend systems with backend services, working with Node.js-based APIs to support real-time and data-driven application behavior.
- Improved application performance through memoization, lazy loading, code splitting, and render profiling to enhance responsiveness and efficiency.
- Built reusable cross-platform component libraries to improve UI consistency and accelerate development across teams.
- Collaborated with product, design, and backend engineers to deliver secure, accessible, and production-ready user experiences.
- Implemented unit and integration testing using Jest and React Testing Library to improve application stability and reduce regressions.
- Contributed to code reviews, CI/CD practices, and engineering standards across the frontend codebase.

Senior Front End Engineer (Contractor)

Ally Bank **August 2020 - November 2020, Detroit, MI**

- Contributed to the migration of a large-scale web application from Ember.js to React, modernizing feature areas while preserving stability and performance.
- Built reusable React functional components with hooks and modern ES6+ patterns.
- Used a modular, domain-driven frontend architecture across multiple feature areas.
- Improved frontend performance by reducing unnecessary re-renders and supporting memoization, code splitting, and lazy loading.
- Collaborated with backend engineers to integrate REST APIs and improve data-fetching efficiency.
- Partnered with product and design to maintain feature parity and UI consistency during the migration.
- Collaborated with the mobile team on a shared React Native component library used across the company's mobile application.
- Developed reusable React Native UI components to support cross-platform consistency on iOS and Android.

Senior Fullstack Engineer

DataStax **September 2018 - August 2020, Santa Clara, CA**

- Built and maintained React and Redux interfaces for distributed database and cloud management workflows.
- Developed interactive network visualizations using Vis.js to improve visibility into database systems.
- Used GraphQL to support efficient client-side data retrieval for complex UI workflows.
- Strengthened frontend quality through unit and integration testing.
- Partnered with QA to improve automated test coverage for evolving product features.
- Developed React Native UI components supporting mobile access to database-related functionality.

Senior Fullstack Engineer

Vibenomics **October 2017 - September 2018, Fishers, IN**

- Architected and developed a React and Redux SaaS application interface supporting client, user, and team workflows.
- Translated static design mockups into interactive, production-ready frontend components.
- Built scalable frontend functionality integrated with backend services and cloud infrastructure.
- Supported data migration and platform integration efforts across Firebase, DynamoDB, and related systems.
- Contributed to full application delivery across React, Redux, Node, and AWS-based infrastructure.

PROJECTS

Engineering Portfolio (Next.js, TypeScript)

engineering-portfolio-teal.vercel.app/

- Built a modular portfolio platform designed to host and showcase multiple applications within a single app shell architecture.
- Implemented routing and application composition patterns to integrate independent applications seamlessly within a unified interface.
- Optimized performance using code splitting, lazy loading, and efficient rendering strategies to improve load times and responsiveness.
- Designed the platform to support scalable expansion, enabling additional applications and features to integrate with minimal overhead.
- Built using Next.js, TypeScript, and modern frontend performance optimization techniques.

EDUCATION

Bachelor of Science in Business Information Systems

Indiana Wesleyan university • Marion, Indiana • 2015 • 3.7

SKILLS

Languages & Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

State & Data: Redux, GraphQL, REST APIs

Backend & Cloud: Node.js, AWS (Lambda, API Gateway, DynamoDB)

Testing: Jest, React Testing Library, Cypress, Playwright

Other: React Native, Component-Based Architecture, Performance Optimization, Accessibility, Cross-Browser Compatibility, Code Reviews, Mentorship, Clean Code Practices
